DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 13, drawn to an assembling method of attaching a two sided unit to a fixing unit, classified in class 29, subclass 428.
- II. Claims 1-12 and 14-19, drawn to a sheet transporting device and an image forming apparatus, classified in class 271, subclass 264.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the claimed assembly method requires orientation of an outer guide relative to two other guides. In other words, the assembly method requires at least three different guides. As such, the product as claimed can be made by another and materially different process.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
